EDUCATION

Grambling State University

Grambling, LA

Bachelor of Science: Computer Science & Mathematics | **GPA: 3.96**

Dec 2027

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Artificial Intelligence, Computer Architecture, Calculus, Object Oriented Programming, Probability & Statistics, Numerical Methods, Deep Learning, Parallel Processing, Operating Systems, Computer Networks

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML/CSS, C#, Swift

Tools & Frameworks: React, Node.js, Express, Flask, Tailwind CSS, PostgreSQL, MySQL, Firebase, Supabase, Git, Docker, Linux, AWS (ECS, S3, RDS), TensorFlow, Scikit-learn, Pandas, NumPy, PyTorch

AI Tools: GitHub Copilot, Claude, ChatGPT, Google Stitch (UI prototyping)

EXPERIENCE

Break Through Tech AI x Accenture | Predictive Maintenance for Oil & Gas Pumps

May – Dec 2025

- Developed a Logistic Regression model using machine health and operating data to predict impending pump failures and reduce unplanned downtime
- Projected **\$3.4M+** savings across 100 days by reducing pump downtime by **84%**, demonstrating ROI of ML in industrial systems

Apple | Arise & Shine Bootcamp | Software Engineering Fellow [\[Demo\]](#)

May – Jul 2025

- Designed and built BloomSpace, a campus wellness platform supporting navigation and accessibility for neurodivergent students
- Implemented graph-based routing (A*) within Node.js backend to generate optimized, low-congestion navigation paths
- Built structured faculty-student check-in and health-tracking features to support personalized student care

MIT FutureMakers Program | AI Fellow [\[Github\]](#)

Jun – Aug 2024

- Built a plant disease detection system using CNNs (VGG16) trained on **160K+** images, achieving **95%+** classification accuracy
- Integrated a TinyBERT-based NLP pipeline to map diagnoses to treatment guidance and reduce manual decisions
- Developed an interactive, map-based web interface to visualize crop health and collect real-time user feedback

PROJECTS

Sentiments - AI Motivational Video Platform | React, React Native, Expo, TypeScript, Docker, PostgreSQL [\[GitHub\]](#)

- Built a modular AI pipeline coordinating LLM inference and media services to generate personalized videos across **29** languages
- Designed provider abstractions for avatar and voice pipelines using TypeScript and Docker, reducing integration time
- Deployed containerized backend services to AWS ECS with Amazon S3 for media storage and Amazon RDS (PostgreSQL) for scalable data persistence

MIT x SureStart | Breath Easy | React, TensorFlow.js, Firebase [\[Breathe Easy\]](#)

- Built TensorFlow.js neural network with federated learning to predict respiratory symptoms from user-generated health data
- Developed React app with real-time AQI tracking, ML-based symptom prediction, and Firebase backend for decentralized storage
- Implemented privacy-preserving federated model training with 4-class severity classification using anonymized community data

ImpactFlow | Basic Service Distribution Platform | React, Tailwind CSS, Flask, Supabase [\[ImpactFlow\]](#)

- Engineered backend logic to match beneficiaries and volunteers using structured inputs and rule-based filtering
- Built secure multi-step registration flows for beneficiaries and volunteers with form validation and conditional data capture
- Developed admin tools and interface for profile inspection, manual overrides, and privacy-preserving consent workflows to support edge-case interventions

HACKATHONS

Amazon x CodePath | Zamani - Food Reservation & Accessibility App | React, Tailwind, OpenAI API, Supabase [\[LiveDemo\]](#)

- Developed a full-stack MVP supporting real-time surplus-meal reservations with filtering, accessibility options, and live availability updates to reduce food waste
- Integrated an AI assistant (“Chefie”) using **retrieval-augmented generation**, performing vector search over food listings with the OpenAI API to ground dietary guidance and reduce hallucinations

Tapia Conference | Next.js, React, TypeScript, Tailwind CSS, Google Gemini API | [\[LiveDemo\]](#)

- Built a conference navigation app using with API-driven schedules and map routing to help attendees plan sessions smoothly

Morgan Stanley x ALPFA | Networking & Career Development Platform | Python, Node.js, MySQL, React, Tailwind CSS

- Built a role-based platform with authentication, profile management, job listings, and admin oversight enabling students to connect with mentors and career opportunities

LEADERSHIP & ADDITIONAL EXPERIENCE

Citi | Markets, Quantitative Analysis Fellow

Sept – Oct 2025

- 1 of 10 fellows in the Quantitative Analysis track, working alongside trading and quant teams on advanced financial modeling

ACM Chapter, Grambling State University | Membership Chair

May 2024 – Present

- Increased chapter membership by **50%** by organizing biweekly technical events, panels, and hackathons
